RACECAP™ SYSTEM
THE ORIGINAL PATENTED

THE RACECAP™ PATENT

Save your bearings with Racecap™ System

Racecap™ System improves performance, the aesthetics and durability of the bearings. The particular internal shape of the Racecap™ cap allows a rapid drainage of liquids and dirt, even in the static phase during washing. During the dynamic phase the internal anti-friction component Racecap™ FLC accomplishes a dynamic function in the expulsion of liquids and dirt ensuring maximum smoothness of the wheel thanks to the absence of contact with the spacer. Racecap™ System is covered by three patents.

Colors available

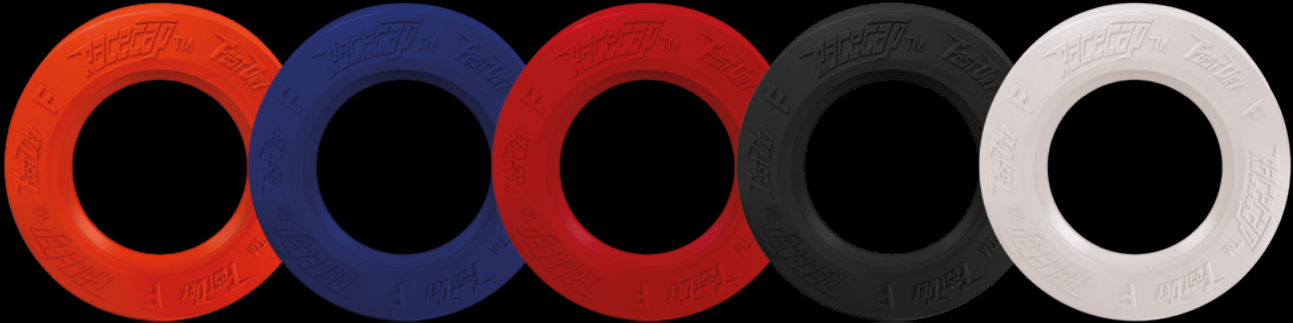

KTM

HUSQVARNA

BETA GASGAS
